PROFESSIONAL SUMMARY

Computer Science graduate specializing in AI-powered web applications and scalable backend systems. Experienced in building production-grade applications with RAG pipelines, LLM integrations (Google Gemini API), and semantic vector search using Sentence Transformers and pgvector. Proficient in Django, Next.js, PostgreSQL, and Linux cloud deployment on DigitalOcean with Cloudflare. Eager to contribute to software engineering or AI engineering roles.

TECHNICAL SKILLS

AI & Machine Learning: LLMs, RAG (Retrieval-Augmented Generation), Google Gemini API, Sentence Transformers, pgvector, Vector Embeddings, Semantic Search, AI-Assisted Question Generation

Backend: Python, Django, Java, PHP, Laravel, REST APIs, C++

Frontend: JavaScript, Next.js, React, HTML, CSS

Database: PostgreSQL, MySQL, MariaDB

Cloud & Infrastructure: Linux (Ubuntu), DigitalOcean, Cloudflare, Web Deployment, Domain & Firewall Configuration

Tools: GitHub, VS Code, Figma, Android Studio (Basic)

PROJECT EXPERIENCE

ConceptIdentify – AI-Assisted Educational Platform *(Final Year Project, 2025–2026)*

- Architected a full-stack AI educational platform using Django, Next.js, and PostgreSQL, enabling instructors to upload learning materials and automatically generate assessments.
- Built a RAG pipeline integrating Google Gemini API with Sentence Transformers and pgvector, achieving context-aware quiz generation grounded in source documents.
- Implemented topic-level semantic search to surface relevant content across large document collections, reducing manual content retrieval effort.
- Designed a lecturer review workflow that balances AI automation with human oversight, ensuring assessment quality before student delivery.
- Deployed the full system to production on Ubuntu (DigitalOcean) with Cloudflare CDN, DNS security, and REST API authentication.

Auto CV Generation System – Full-Stack Web Application *(Sophomore Year)*

- Developed and deployed a web application that generates structured, professionally formatted CVs from user-provided input via a dynamic form interface.
- Implemented backend rendering logic and PDF export, enabling users to download a polished CV without design knowledge.

Legend of Kage – 2D Action Game *(Personal Project)*

- Designed and developed a complete 2D ninja action game in Godot 4, implementing player controls, enemy AI, collision systems, and level progression from scratch.

EDUCATION

Bachelor of Science in Computer Science · Paragon International University · 2023 – 2026

Pichenda High School · 2016 – 2022 · Valedictorian
